

KANSAS CITY ATTIC FANS

KC'S #1 WHOLE HOUSE FAN INSTALLER!!

913-788-6326 • austin@kansascityatticfans.com • 26305 Owens Lane, Freeman, MO 64746

About KC Attic Fans

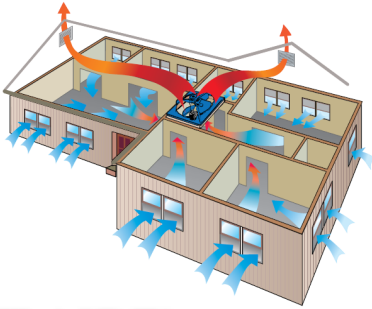

Kansas City Attic Fans was started in October 2013 by Austin & Tracey Siemens. For several decades Gordon Energy & Drainage had been the # 1 installer of attic fans in the Kansas City area. In an effort to focus on its core products and services, Gordon Energy decided to get out of the attic fan business. Austin who continues to work at Gordon Energy in the day quickly jumped on the opportunity to seamlessly continue this business. Kansas City Attic fans is a small home based company, but what we lack in size we make up for in quality and customer service. We see a great advantage to the small size of our company.

Our Service

I would like to introduce you to Kevin Edwards who is our primary and key attic fan installer. Kevin lives in Gardner, KS. He has been married to Kim for 12 years and has 5 kids. Kevin works for KC Attic Fans part time and works full time for Norfolk Southern Railroad. His railroad job has flexible hours which works well for KC Attic Fans since he can find time in the day, night or weekends to accommodate your schedule. Kevin has years of experience and has installed hundreds of attic fans. When this attic fan opportunity opened up, Kevin was at the top of my list to hire. The small size of our company and the close communication and coordination with Kevin has lead to superior quality of service.

Why Install a Whole House Fan / Attic Fan

Whole House Fans are an efficient, economical way to cool your home during spring, early summer and fall. Moving air at 85° feels as cool as still air at 78°, so you can run your air conditioner less. Our Whole House Fans will cool your home to the outside temperature 5 to 10 times faster than central air conditioning at less than 1/10th the cost! Whole house fans are designed to change the air in your home by drawing in cooler outside fresh air and exhausting the warmer inside air. Well-established Industry standards recommend using a fan that will change all of the air in your house once every 1-1/2 to 2 minutes. Most people who have attic fans really look forward to those first nice spring and fall days when they can open some windows, turn on their attic fan and bring in a gentle breeze of fresh outside air.

Why Use A Triangle Attic Fan

Kansas City Attic Fans installs the Triangle Engineering Comfort Cooler Whole House Attic Fan. The Triangle fans are top of the line attic fans, sometimes called the Cadillac of attic fans. Consider this a long term investment in your house that should be expected to last over 30 years. They are not the cheaply constructed, foreign made, noisy & low performing types that are available at big box stores. One of the biggest complaints with attic fans is the noise level. Triangle addressed this problem by making their fan belt driven, engineering their fan with solid heavy gauge materials and constructing their shutters with similar attention to detail utilizing aluminum material as opposed to plastic that is known to rattle. There are many other reasons why Triangle is better than the competition, but the bottom line is that you are getting a longer lasting and higher quality, made in the USA product with a Triangle fan.

Comfort Cooler

Why Use Kansas City Attic Fans

In addition to the high quality products we use you will also see advantages to using KC Attic Fans to handle your install. We are the only company in Kansas City that focuses solely on Whole House Fans. This is all we do and we are focused on doing this one type of job very, very well. We have 3 sizes of fans (30", 36" & 42") & 7 types of shutters in stock in KC. We will advise you on the best option for your house and your unique situation. Just because you have a big house does not mean you automatically want the biggest fan available. There is more involved in the decision than just the overall size of your house. If you are building a new house and plan to put in an attic fan make sure to let your builder know before framing is complete. It is easier and less expensive to do when planned for in advance. There is a reason the majority of the home builders in Kansas City use us for their Attic Fan installs. They want their homes to reflect quality throughout and they know using KC Attic Fans is one choice that helps them achieve this. Visit our website at www.kansascityatticfans.com or call us at (913) 788-6326 for more general info & more reasons to use KC Attic Fans.
