

**KANSAS CITY ATTIC FANS**

**KC'S #1 WHOLE HOUSE FAN INSTALLER!!**

### CSS30 Not Cut Joist Shutter for 30" Fan

### CSS36 Not Cut Joist Shutter for 36" Fan

### No-Cut Joist Shutter

#### Helpful tips regarding CSS Shutters.

- When cutting the sheetrock leave the thin strip of sheet rock attached to center truss.
- A minor complication with truss shutters is the center truss that is in the way of lifting the fan through opening. Whenever possible please consider making your attic access hole big enough to allow the attic fan into the attic. This would be 36" in length for a 30" Fan and 44" for a 36" fan. If this is not done KC Attic Fans has to make 2 trips to the house. 1st trip to get the fan in the attic before sheetrock and 2nd trip to finish up the install once sheetrock is complete. **MOST IMPORTANTLY. Plan ahead on how the attic fan is getting into the attic!**
